

THE CITY OF SAN DIEGO

THE PROPOSED LA JOLLA SHORES LIFEGUARD FACILITY IMPROVEMENTS

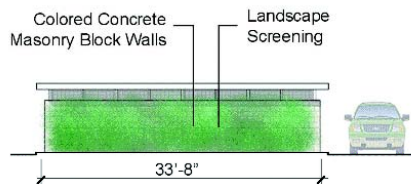

Start of Construction: September 2004

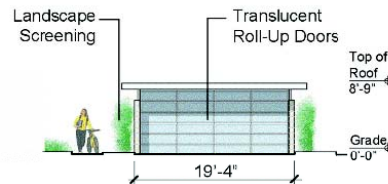

LIFEGUARD STATION SOUTH ELEVATION (FROM PARK)

LIFEGUARD STATION EAST ELEVATION (FROM PARKING LOT)

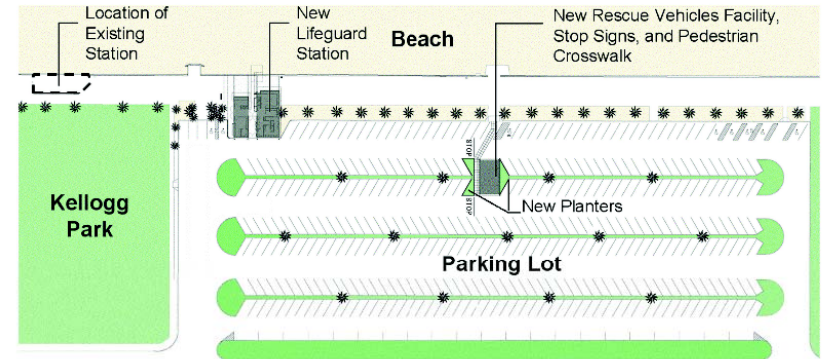

RESCUE VEHICLES FACILITY SOUTH ELEVATION

RESCUE VEHICLES FACILITY EAST ELEVATION

Project Summary

Area:	
Lifeguard Station:	1,485 SF
Storage Facility:	650 SF
Total Building Area:	2,135 SF

BUILDING SITE PLAN

No Scale

EXISTING PUBLIC PARKING SPACES: 374

NEW PUBLIC PARKING SPACES: 374

Project Information

Designed with community and Lifeguard staff participation, the new 1,485 square foot La Jolla Shores Lifeguard Station will provide a modern public safety facility for users of La Jolla Shores Beach and Kellogg Park. The new station will replace the existing building and will provide the City of San Diego's Lifeguard staff with much needed space to support the area's heavy public usage. The new facility will house modern safety features and equipment, as well as accommodate the needs of a variety of users.

To support the new station, a new 650 square foot Rescue Vehicles Facility will be located within the parking lot near the beach access driveway. The location was selected to minimize the amount of travel distance between the location of vehicle storage and the beach access driveway. The new building replaces the metal storage container that currently exists within the parking lot. Some parking spaces will be reconfigured so that there will be no change in the amount of parking spaces. New pedestrian cross-walk and traffic stop signs are placed near the new building to slow down traffic, creating a safer pedestrian environment.

The design for the new station was created to maximize views from the park and parking lot while minimizing the physical impact to the boardwalk. The design was developed through an inclusive design process with the community. The new lifeguard station was approved by the La Jolla Shores Association Board on April 9th, 2003 with a 12-1-1 vote in favor of the design.

This project is funded by Fire and Lifeguard Facility Improvements Bond proceeds, along with a small portion of seed money from TOT Coastal Infrastructure Funds.
